

# EZ-SNAP

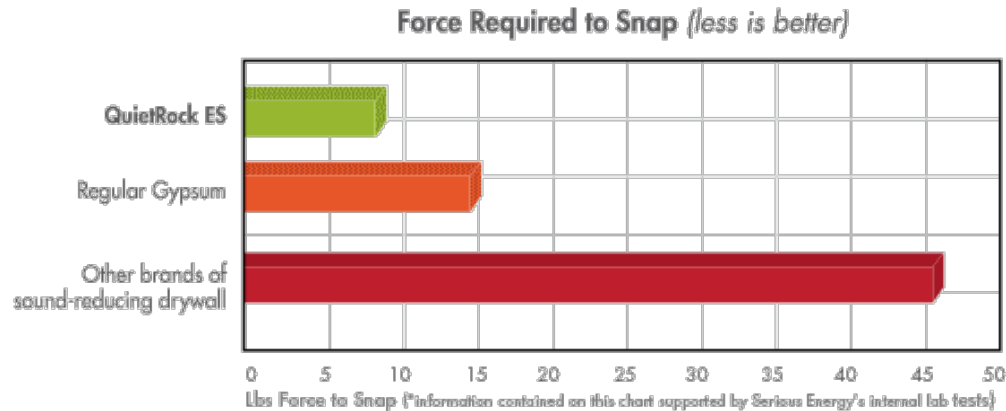

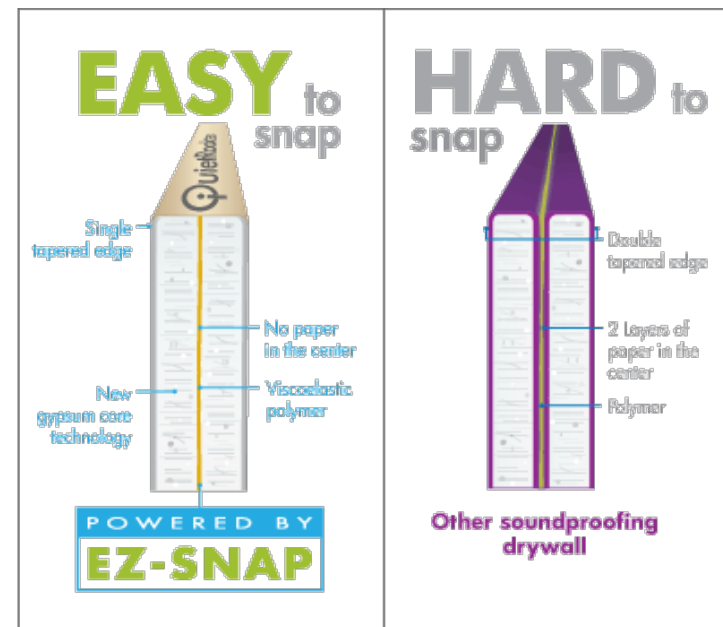

## Easier, faster, lower cost soundproofing

EZ-SNAP is a revolutionary technology with an advanced gypsum core and no paper or metal in the center, making it 4 times easier to snap than any other noise reducing drywall brands. The Patented EZ-SNAP technology allows simple and straightforward soundproofed-drywall installation. EZ-SNAP technology was first introduced in 2009 with **QuietRock ES**. Since then it has changed the building construction industry. With easier faster installation QuietRock ES has become the leading sound damped drywall panel installed today.

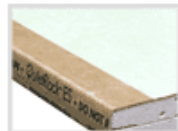

Having been well established in the market place, the EZ-SNAP family expands with **QuietRock ES Mold Resistant**. This addition offers the same high acoustic performance, meeting STC code requirements with a single layer, but with an advanced mold resistant treatment – noise and mold protection all-in-one!

EZ-SNAP delivers high, reliable acoustic performance at the lowest installed cost - saving time, labor, materials, and valuable floor space. With over 5 million square feet installed nationwide, EZ-SNAP will continue to develop providing products to fit specific applications – making it the leading brand of soundproofing drywall chosen by professionals.

## 4x Easier to Snap Than Any Other Acoustic Drywall
